

Increase Resiliency, Reduce Costs, and Grow Profits

Profit Miners is a unique group of seasoned professionals who can help you improve operations, reduce costs, minimize waste streams, and increase cash flow. We tailor our engagements to your company’s unique culture, situation, and needs to capture results quickly. Our focus on continuous improvement, standard work, and sustainability allow implemented initiatives to continue producing for the long-term.

Results? Our clients typically realized improvements in productivity, quality, on-time delivery, and cash flow ranging from *15% to 40% or more*. Areas where we can be of assistance include:

- Process Improvement
- Cost Reductions
- On-Time Delivery
- Project Funding
- Set Up Reduction
- Quality Improvement
- Waste Stream Management
- Training
- Energy Management & Cost Reduction
- Scrap & Rework Reduction
- Facility Layout

To help clients deal with rising energy costs, we created CT Energy Programs which takes a continuous improvement approach towards reducing energy & waste stream related costs. We offer three new programs, funded through Energize Connecticut, that are specifically designed to help Connecticut manufacturers increase efficiencies, productivity, and profitability:

The **Business Sustainability Challenge (BSC)**, helps you become more competitive and resilient by taking a strategic look at important aspects of your business - energy, workforce, operations, and waste streams. We then help you develop and implement strategies to reduce risks and leverage opportunities to shield your business from changes in the marketplace or economy while continually improving operations and profitability over time.

The **PRIME Program** provides you with the tools and resources to streamline processes, eliminate or reduce waste, improve efficiency, and reduce your energy consumption. Using a team approach over a 3-day Kaizen, we help you identify and implement opportunities to improve manufacturing or support processes using lean and continuous improvement concepts. The end result is a more productive and cost effective process.

The **Energy Usage Assessment (EUA)** shows you exactly where, how, and why you use energy in your facility. Once you can “see” how you utilize energy, you can implement strategies to both better manage and reduce your energy usage – and costs. Upon implementing identified energy conservation measures, your utility will pay you 5 cents for every kilowatt hour saved and provide funding options to help offset installation costs.

You can find more information about these and other programs at: www.CTenergyprograms.com
